Cells Fundamental unit of life

@ExaminAI Notes | comprehensive | 12/9/2026

Welcome to my personal revision notes on Cell Biology. I've distilled the core mechanics here-focusing on the "why" and "how" rather than just rote memorization.

01 1. THE CELL THEORY & STRUCTURAL FOUNDATIONS

Everything starts w/ the Cell Theory. It's the bedrock of biology.

1. All living organisms are composed of cells.
2. The cell is the basic structural and functional unit of life.
3. All cells arise from pre-existing cells.

TIP

margin note: Don't forget Virchow's contribution to the third point-it's a classic exam trap!

02 2. THE PLASMA MEMBRANE: THE GATEKEEPER

Building upon the structural foundation, we must understand the Fluid Mosaic Model.

KEY

Phospholipids are amphipathic molecules forming a dynamic bilayer.
